

PROFESSIONAL SUMMARY

UX/UI Designer and Frontend Developer with a full-stack foundation and hands-on experience bridging design systems and technical implementation. I design with the backend in mind, understanding what is buildable, scalable, and consistent across platforms. Skilled at translating user research and business requirements into reusable components, clear user stories, and structured information architecture that engineering teams can deliver. Experienced working across product, design, and engineering teams in Agile environments, with a proven ability to represent both design and technical perspectives to cross-functional stakeholders.

CORE COMPETENCES

Platform & Design Systems: Component libraries, shared UI patterns, design-to-dev alignment, information architecture, reusable templates.

Design Tools: Figma, Adobe XD, Wireframing, Research, Design Systems, Prototyping.

Frontend: Angular, React (familiar), Django, HTML, CSS, Python, JavaScript, Git.

Analytics: Tableau, Power BI, Excel, Google Analytics, Excel

Languages: Spanish and English speaker.

EXPERIENCE

- Relationship Banker | Bank of America | Philadelphia, PA

October, 2025 – April, 2026

 - Conducted qualitative user research through daily customer interactions, in a highly regulated financial environment, uncovering behavioral patterns, and pain points, and needs across complex financial journeys.
 - Created customer journey maps for onboarding, loan applications, and dispute resolution to identify friction points.
 - Strengthened skills in UX writing, and real-time requirements gathering, and problem-solving through high-volume, high-stakes customer support.
- Product Designer | Amsix | La Paz, Bolivia (Project-based)

Dec. 2023 – May 2024

 - Designed UX/UI for Bolivia's government mining royalties registration platform, ensuring data accessibility and user-centered functionality at scale, applying consistent design patterns across a complex, multi-stakeholder system.
 - Built reusable UI components and design templates aligned with technical implementation constraints, ensuring consistency across platform surfaces.
 - Optimized platform performance and user engagement by 50% through data-driven analysis, usability testing, and iterative enhancements.
 -
- Product Designer | Tiger Group – Washington D.C., US (Project-based)

Nov. 2022 – Feb. 2023

 - Partnered with engineering and design stakeholders to translate user research insights into website architecture, reusable component patterns, and business model alignment.
 - Designed and tested interactive user flows in Figma, ensuring usability and technical feasibility across both design and development handoff.
 - Led performance audits and implemented UX enhancements grounded in technical understanding of backend capabilities, contributing to a 30% increase in client acquisition.
 -
- Frontend Developer | KalixSmith - Baltimore, US (Project-based)

Nov. 2022 – Feb. 2023

 - Redesigned website architecture informed by UX research and user journey mapping, balancing design intent with backend constraints and SQL database requirements.
 - Implemented scalable backend systems ensuring data accuracy, reliability, and security — providing full-stack context when defining frontend component requirements.
 - Improved internal data flow and user experience through system performance analysis and collaborative enhancements, driving a 30% increase in client base.

International Cultural Exchange Program | Philadelphia, PA**June 2021–June 2023**

- Strengthened cross-cultural communication and leadership skills by organizing and leading events that fostered community engagement.
- Adapted to new environments, showcasing problem-solving and interpersonal skills in diverse settings.

Product Designer | Angeles Co. | La Paz, Bolivia**June 2017 - June 2021**

- Streamlined complex workflows and internal communication systems to enhance team coordination and operational transparency, developing reusable templates and reporting structures used across the organization.
- Conducted data-driven analysis to identify user pain points across logistics and supply chain processes, reducing inefficiencies by 40% through targeted design and process improvements.
- Designed intuitive reporting structures that improved stakeholder access to real-time information, aligning team actions with strategic goals.

Internship | San Andres University | La Paz, Bolivia**Nov. 2019 - Dec. 2020**

- Developed and maintained data-driven web applications using Angular and Python, improving accessibility and system reliability for a faculty of over 7,000 students.
- Executed and optimized backend systems using SQL/NoSQL databases, building full-stack intuition that informs design decisions with technical realism.
- Collaborated with academic teams to design data visualization tools, supporting data-driven decision-making and establishing early experience with shared component design.

EDUCATION

BS in Computer Science**2021**

San Andres University | La Paz, Bolivia
